Overview

The Chowmain Google Android TV driver is designed to primarily control Google Android TV Set Top Boxes. This allows you to utilise the Control4 remotes to navigate the Android operating system and control applications as you would with a normal infra red remote control.

It also allows application launching via the Apps driver (which lists all installed apps), via mini drivers for individual apps (for the most popular applications), via coloured buttons and also programmatically.

Note that this driver requires a 3rd party application called **Zank Remote** to be installed and configured on the device. No additional hardware dongles required.

Features

- Compatible Devices
 - Android TV devices
 - AirTV
 - Chromecast with Google TV
 - Nvidia Shield
 - Xiaomi MiBox
 - Other Google / **Android TV Boxes** (Not to be mistaken for normal Android)
- IP Based communications
- Auto Discovery of Box
- Mappings
 - Up
 - Down
 - Left
 - Right
 - Select
 - Cancel
 - Page Up
 - Page Down
 - Menu (Home)
 - Volume Up
 - Volume Down
 - List installed apps and launch applications from navigator
- Launch applications from coloured buttons
- Audio End-Point assignment for volume up and down functionality
- Video End-Point assignment

Change Log

Version #20210211 – 11-FEB-2020

- Implemented ADB based control option.

Version #20210203 – 03-FEB-2020

- Implemented skip_fwd, skip_rev, play/pause commands

Version #20210114 – 14-JAN-2020

- Rewrite of driver. Now uses Zank Remote instead of LANmote

Version #20170710 – 10-JUL-2017

- Migrated to driverCentral.

Version #20161027 - 27-OCT-2016

- Updated to support newer LANmote Deluxe updates

Version #20160926 - 26-SEP-2016

- Major Update.
- Added support for new Chowmain Android Mini drivers.
- Added MSP to list and launch all apps installed on the android box.

Version #20150818 - 18-AUG-2015

- Implemented Dealer Demo Licencing

Version #20150407 - 07-APR-2015

- Resolved issue where logs on 2.6 systems would fill out controller storage causing system stability issues. This only effects systems where people have set the debug logs to 'print and log' or 'log' and have forgotten about it over longer periods of time.

Version #20141201- 01-DEC-2014

- Initial Release

Install and Configure Device

Background

This driver utilises the **Zank Remote - Remote for Android TV Box** to control the Google TV / Android TV device (Nvidia Shield, MiBox etc)

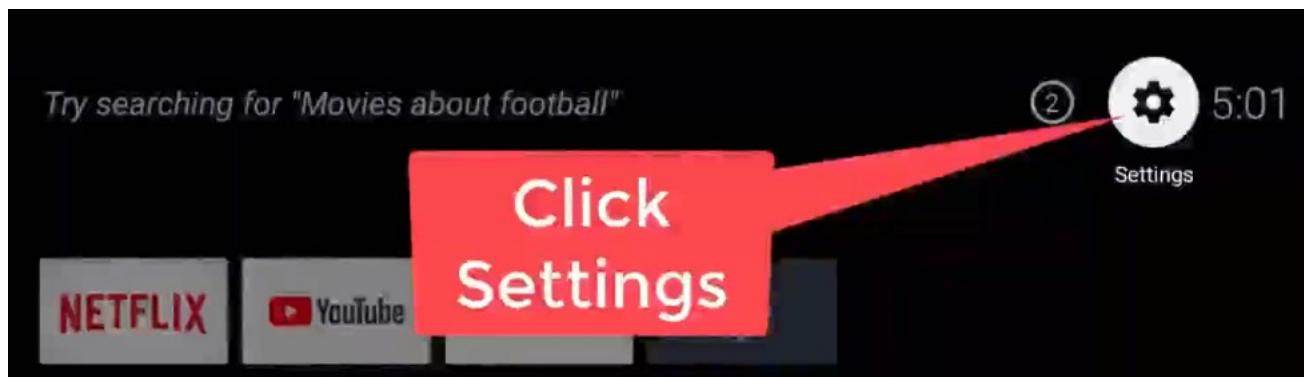

All communication between this driver and the Android device is done via this app.

Prepare the Android TV device

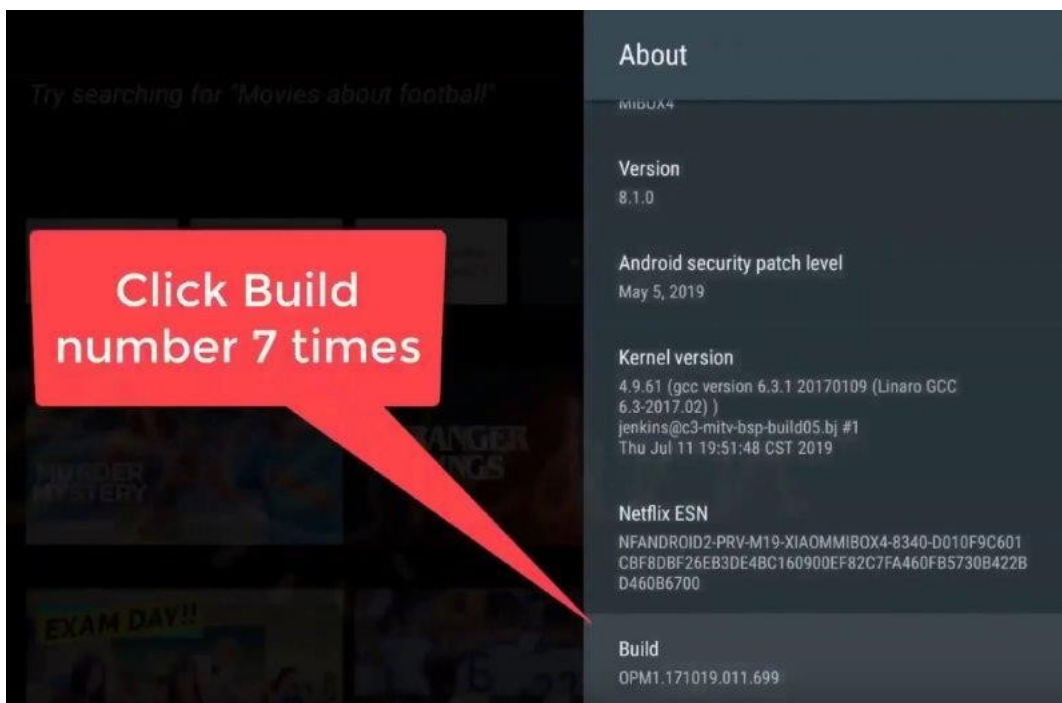

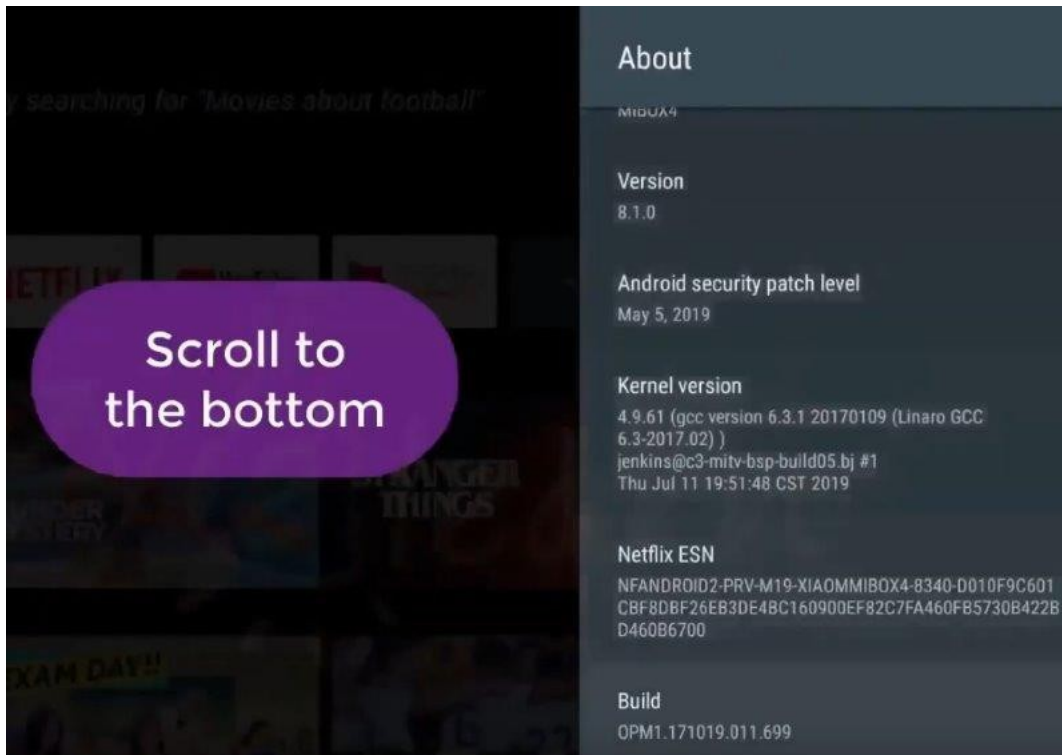

The Zank Remote requires the following settings to be enabled to function properly

Developer Mode

1. From the Home screen, select **Settings >Device Preferences > About**

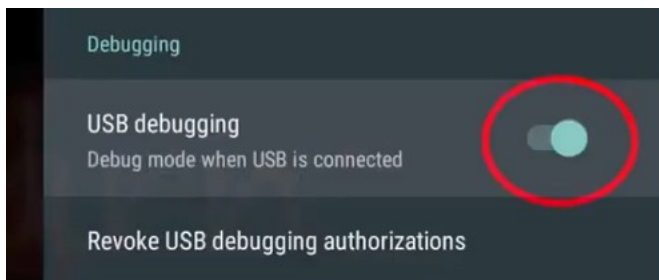

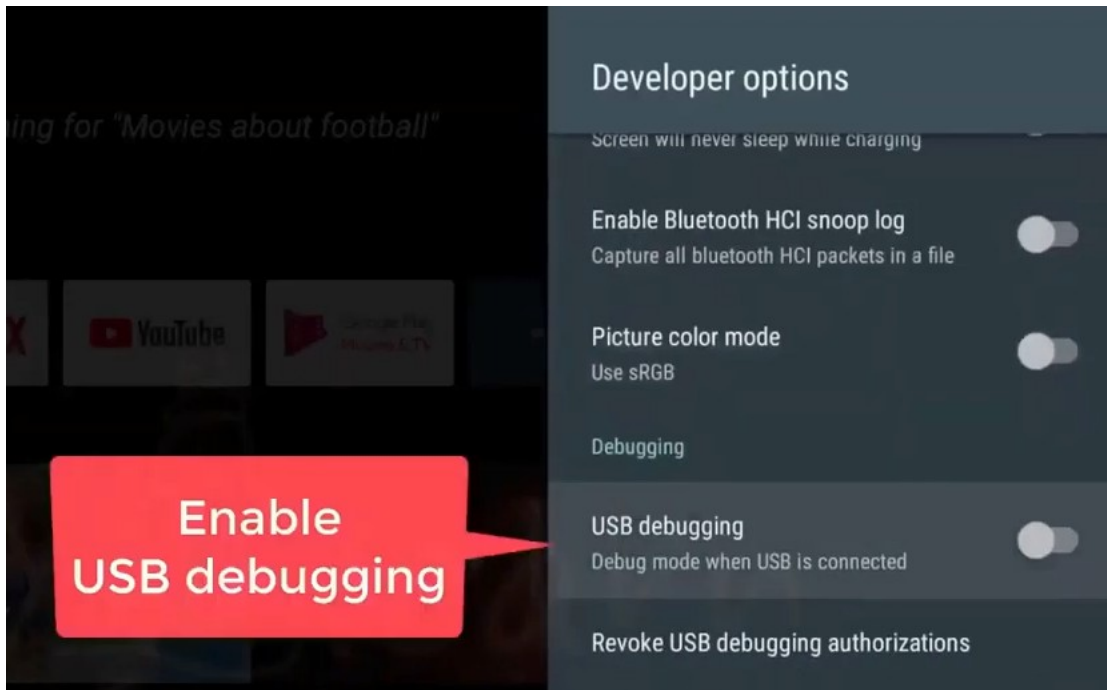

2. Now scroll down to **Build** and click on Build several (7x as of writing this manual) times until the message appears, "You are now a developer!"

USB Debugging

1. From the Home screen select **Settings > Device Preferences > Developer Options > USB Debugging** and select **OK**

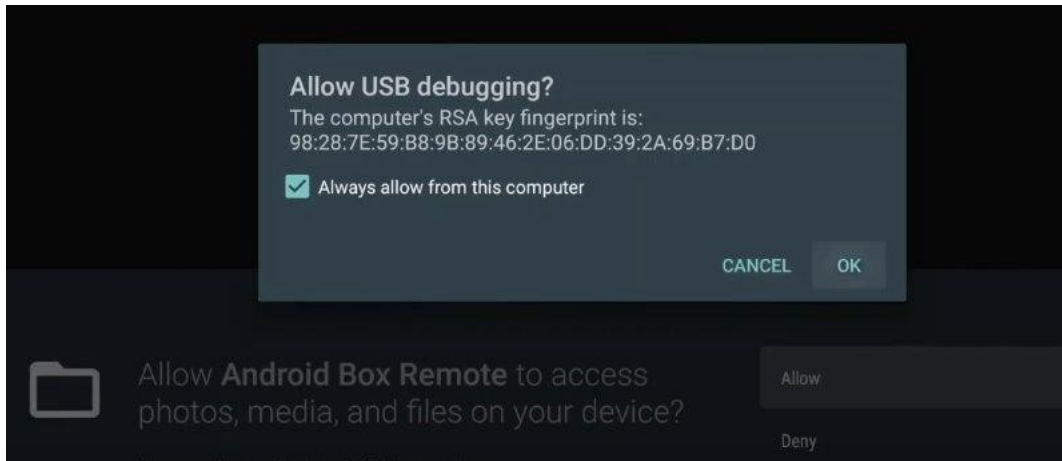

Install the Zank Remote app

Android TV

Search for and install **Zank Remote** in the **Play Store** on the **Android TV** device

1. Start the app
2. Tick **Always allow from this computer** and select **OK**

3. Take note of the IP address displayed on your TV. This is what you enter into the drive

Android Portable Device

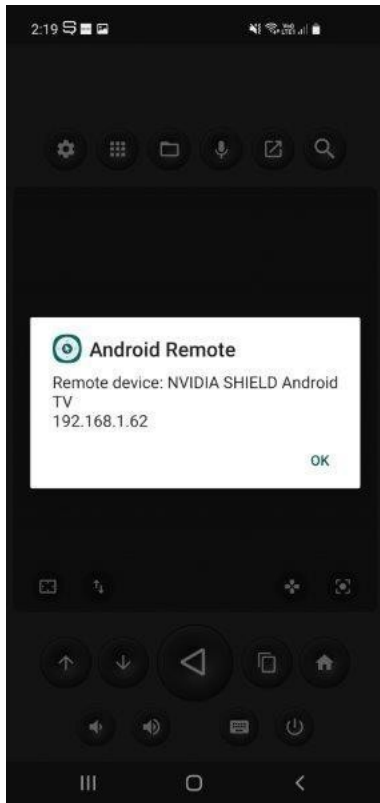

1. Search for and install **Zank Remote** in the **Play Store** on your **portable** device
2. Open the App and press the **Search** button

3. The app will search your network for the Android TV running the Zank Remote app

4. The app will display the device it has found and the IP address

5. Now confirm that you can control the Android TV with your mobile device

Note The developer's installation video is located here; <https://youtu.be/CV0ed7mSEPw>

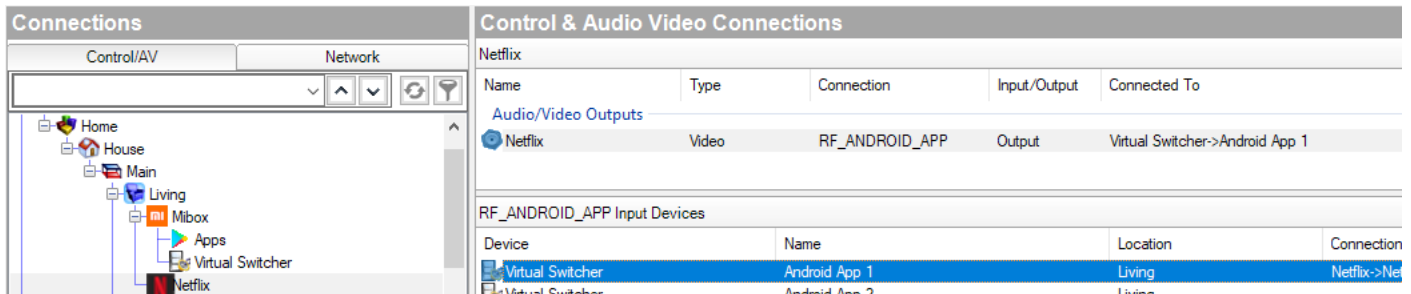

Install the Driver

NOTE: You must complete the steps above before proceeding with the driver install

1. Launch **Composer Pro** and connect to your project
2. In **System Design** select the **Search** tab on the right hand side
3. Type in your media player name (eg: **Chromecast with Google TV**) in the search field
4. Select the result with **(Zank)** in the name and add it to your project
5. Highlight the driver on the left hand side
6. The driver should automatically detect the Android TV device running Zank Remote and configure itself appropriately. *If you have multiple devices running Zank Remote, please set the IP address manually*
7. Select **Zank ADB** under Control Method on the **Properties** tab
8. You can confirm that the driver is connected by going to **Actions > Print Apps** and confirming that the Lua tab has a list of all the installed apps on the Android TV
9. You have now completed the driver installation

Setting up Miniapps

1. Launch **Composer Pro**
2. In **System Design** search for the required miniapp (**Netflix - Zank** for example) and add it to your project
3. In **Connections** select the miniapp you've just added and bind it to any of the **Virtual Switcher** inputs that you added for this driver

The screenshot shows two panels from a software interface. The left panel, titled 'Connections', has tabs for 'Control/AV' and 'Network'. It displays a hierarchical tree view with nodes for 'Home', 'House', 'Main', 'Living', 'Mibox', 'Apps', 'Virtual Switcher', and 'Netflix'. The right panel, titled 'Control & Audio Video Connections', shows a table for 'Netflix' connections. It includes a section for 'Audio/Video Outputs' and a section for 'RF_ANDROID_APP Input Devices'.

Name	Type	Connection	Input/Output	Connected To
Audio/Video Outputs				
Netflix	Video	RF_ANDROID_APP	Output	Virtual Switcher->Android App 1

Device	Name	Location	Connection
Virtual Switcher	Android App 1	Living	Netflix->Net
Virtual Switcher	Android App 2	Living	

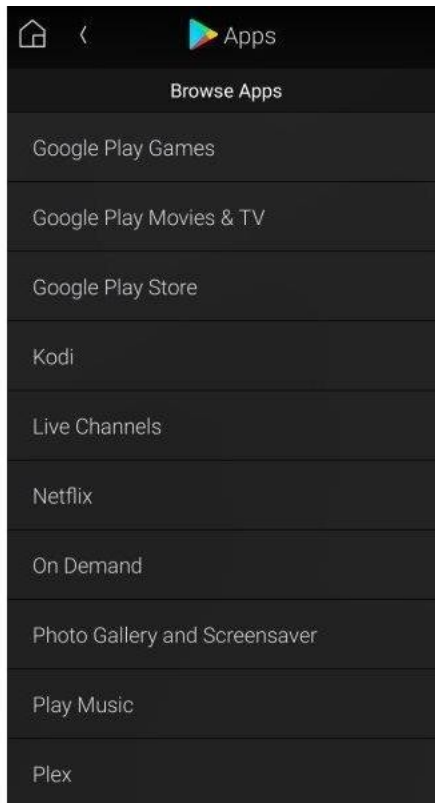

4. Refresh Navigators and you will now be able to launch Netflix directly from Control4

Play Integration

This driver adds a shortcut to all the apps installed on the Android TV device to the Watch experience menu;

This is a dynamically generated list of apps that are available on the Android TV

Keymap

Control4	Android TV
Up	Navigate Up
Down	Navigate Down
Left	Navigate Left
Right	Navigate Right
Select	Center Button
Play	Play / Pause
Pause	Play / Pause
Cancel	Back
Menu	Home Screen
Guide	Home Screen
Skip Forward	Next
Skip Previous	Previous
Scan Reverse	Rewind
Scan Forward	Fast Forward
Stop	Stop (doesn't work on all apps)
Page Up	Page Up on Selected Panel
Page Down	Page Down on Selected Panel
Channel Up	Page Up on Selected Panel
Channel Down	Page Down on Selected Panel
Volume Up	Volume Up (need to set to audio endpoint)
Volume Down	Volume Down (need to set to audio endpoint)

Licensing

- How does the trial period work?

All Chowmain drivers are free to use for a set trial period. When the trial expires the driver will cease to function until you purchase a licence and apply it to the driverCentral project.

- Where do I buy a Licence from?

This driver is developed by Chowmain software & Apps and is distributed by driverCentral, Inc <https://www.drivercentral.io/chowmain-ltd>

To purchase a driver:

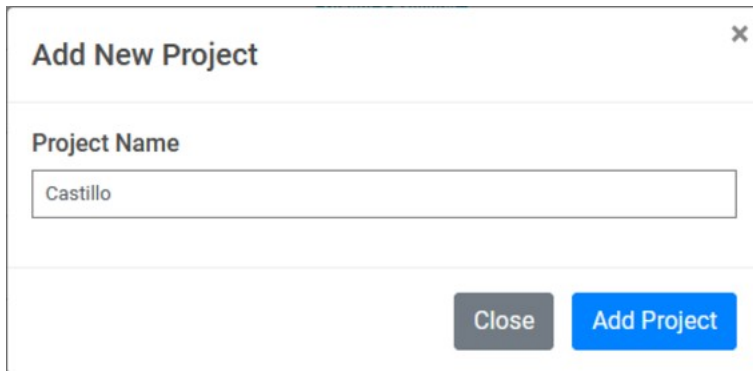

1) On driverCentral, purchase a license and register it to your project

1) If the driver is not already installed in your project, download it and install it

1) If necessary, use the cloud driver's Action: "Check Drivers" to force the licence to download into the project

Creating a Project on Driver Central

1. Visit <http://www.drivercentral.io>
2. Log into your driver Central dealer account
3. Click **Portal**
4. Click **New Project**
5. Enter the project name

The screenshot shows a modal dialog box titled "Add New Project". It has a close button (X) in the top right corner. Below the title bar, there is a label "Project Name" and a text input field containing the word "Castillo". At the bottom right, there are two buttons: a grey "Close" button and a blue "Add Project" button.

6. Click **Add Project**
7. Click on the project we just created

Project	Status	Created
Castillo	Unassigned Project	1999-12-31 23:59:56

8. Take note of the **Project Token** as this will be used later when we install the Cloud Driver

9. Click **Close**

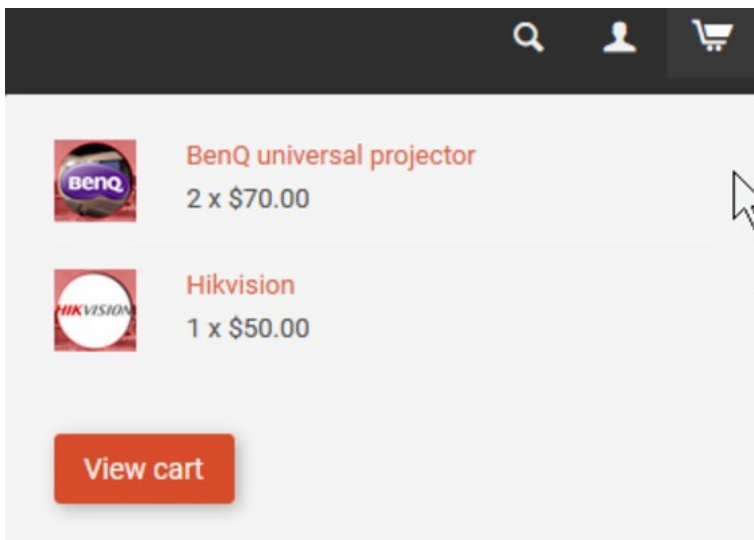

Purchasing a Driver Licence

1. Visit <https://www.drivercentral.io/chowmain-ltd/> and find the product/driver you want to purchase a licence for

2. Click on **Add to Cart**

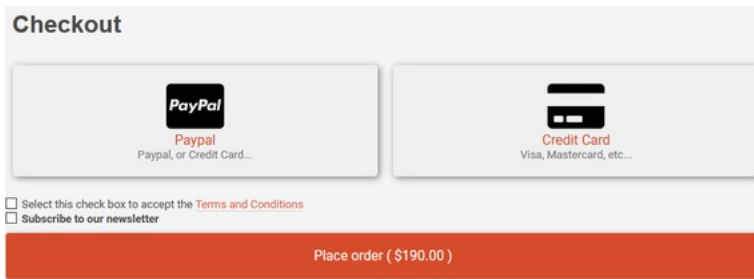

3. Now click the shopping cart icon (top right) and click **View cart**

4. Confirm that your order is correct and click on **Proceed to checkout**

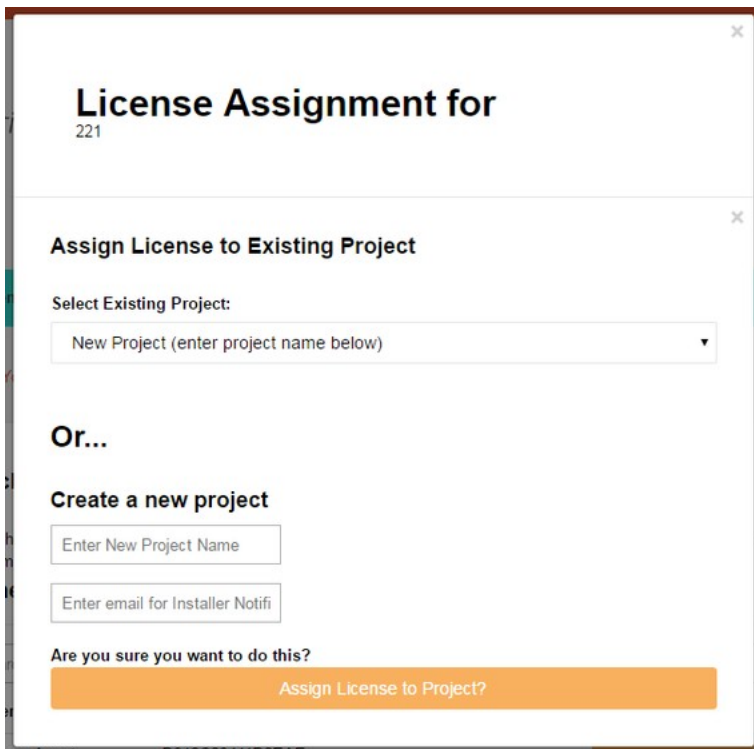

5. Choose your payment option, provide the relevant details and click **Place order**

6. You will now be at a page where you can see your purchased licence

7. From here assign the licence to the project we created or if you did not follow that step create a new project

Install the driverCentral cloud driver

1. Visit <http://www.drivercentral.io>
2. Log into your driver Central dealer account
3. Click **Portal**
4. Click **Cloud Driver**

5. Copy the C4Z driver to My Documents\Control4\Drivers directory
6. Add the driver to your project
7. Click on the driver to view it's properties

Cloud Status	Please enter cloud project token below...
Project Information	(1) Total, (0) Licensed, (0) Trials, (1) Expired, (0) Updates.
Driver Version	1001
Project Token	<input type="text"/>
	Project token from driverCentral.io project portal
Driver Actions	<input type="button" value="v"/>
Debug Mode	Off <input type="button" value="v"/>

8. Type in the project token we took note of earlier
9. Click **Actions** tab
10. Click **Check Drivers**

Install Chowmain driver

1. Install the Chowmain driver
2. You will notice that the Activation Status reflects a Licence Activated state
3. Any driver that does not have a purchased licence will have a trial licence activated via the marketplace
Note that there is no way to reactivate the trial so please use wisely
4. If you do not then press the Check Drivers action in the driverCentral Cloud driver again

Activation Status	Update Available!!! License Activated
Driver Version	1002
Driver Information	Navigate to connections tab and make serial binding
Automatic Updates	Off <input type="button" value="v"/>
